

MIT CSAIL Alliances | Lori Director video export 2

[MUSIC PLAYING]

Hello and welcome to CSAIL Alliances. I'm Lori Glover, the managing director of Global Strategic Alliances for CSAIL, MIT'S Computer Science and Artificial Intelligence Laboratory. At CSAIL, we cover virtually every discipline in computer science and artificial intelligence, whether that be robotics, machine learning, artificial intelligence, natural language processing, computer vision, cybersecurity, wireless technology, algorithms, architecture, even computational biology. It's all here at CSAIL.

If you are now a member, you may have met your client relations coordinator. Your client relations coordinator is your person inside the lab here at CSAIL. They really are your boots on the ground. During onboarding, you'll be able to talk to them about what's most important to you and how to best align your needs with the benefits that you can get from CSAIL alliances?

When you join us as a member, you're really plugged into our ecosystem, whether it's being invited to a talk, a demo, conference. You're going to get papers, lots of different things. That client relations coordinator is your go to person for anything you want to do to connect with CSAIL. As I've mentioned, there is connections around research, around new technologies, students and talent acquisition, talent development, and startups.

For this reason, we ask that you connect with us people across your organization responsible for things like recruiting, learning and development, innovation, and, of course, research. The reason we ask for those different connections are because we want to make sure that the right people are aware of this benefit that your entire company can take advantage of. So please do share with us the names of those people as a principal point of contact. That person will always be included on any communication.

Also, please feel free to share liberally with what assets you are given from the lab. We don't put any limit on the amount of people that can participate in this connection or in the events that we do. Sharing broadly across your business and different business units is really how you gain a lot of value out of your connection with CSAIL.

CSAIL's mission is to improve the way people live, work, play, and learn globally through computation. And we do that by addressing and hopefully solving really hard challenges. And when you share those challenges with us, it really helps the faculty researchers make the impact that is really their ultimate goal.

And so with that, I want to welcome you to CSAIL alliances and on behalf of myself and the team and the whole lab, and let you know that we are here to answer any questions you have and to help you in any way connect with all that is going on in CSAIL. And for more information, you can check out the links below in this video, and those resources will help you explain even more about how to connect and best align within the lab. Thank you.
